A fashion doll stand for single-legged support of a fashion doll comprising a Shaped Base having a flush underside with a center of gravity, and a hollow Tapered Support joined perpendicular to said Shaped Base through the center of gravity. The single-legged doll stand does not clamp or clip the leg of the doll in any way, but simply allows free insertion/removal of one leg or the other to provide a full range of posability of the fashion doll in a supported position. It also ensures sturdy two point support: 1) full orthogonal support around the mid-to-upper calf; and 2) lateral stabilization support at the ball of the foot; thereby providing excellent lateral, horizontal and rotational stability for the fashion doll in a variety of upright positions.
